

# ValuTek® Low/Medium Pressure Fan Cooler

- ValuTek Fan Coolers offer an effective, energy efficient method of eliminating the dangers of heat stress.
- Economical way to cool both large and small areas, either indoors or outdoors.
- Available in fan sizes from 18" to 48", in wall or ceiling mount, oscillating pedestal, and box styles.
- Choose either low/medium pressure or powerful high pressure coolers.
- Fine spray of water combines with the air movement of the fan to reduce temperatures up to 25 degrees.
- Ideal for all agricultural, horticultural, commercial and industrial applications.
- Fast heat relief for your poultry, livestock, or workers.

## Installation Instructions

1. Unplug the fan from the wall outlet or flip the circuit breaker off before attaching the fan cooler kit to the fan.
2. Center the cooler assembly on the front (exhaust) side of the fan grill with the straight hose downward as shown to the right.

**ATTENTION:** To prevent injury and damage to the fan, do not attach the cooler assembly to the back (or intake) side of the fan.

3. Wrap a cable tie around the cooler hose and one or two grill bars and pull the cable tie snug to hold the cooler assembly in place.

**ATTENTION:** Do not over-tighten tie. Doing so will restrict the flow of water through the cooler assembly.

4. While keeping the cooler assembly centered, continue attaching it to the fan grill. Space the remaining cable ties evenly around the cooler hose and allow the straight end of the hose to hang free.
5. Return to each tie and cut off the free end.
6. Attach the straight, supply hose to a garden hose or other water supply and check the operation.

## Care and Maintenance

- To clean the assembled fan cooler, use soapy water and brush with a soft brush. Rinse with clean water.
- To unclog a nozzle filter, remove the nozzle from the fitting and spray the mesh filter with water. Brush with a soft brush to remove contaminants and rinse.

**ATTENTION:** To prevent damage to the nozzles, *do not use solvents or harsh cleaners. DO NOT stick pins or other sharp objects into the nozzles.*
